
International Business Proper planning in the design of new school facilities saves time, money, and resources. The importance of planning increases when funds are scarce, as limited dollars must be put to their best use. A dialogue should be generated in the community and among members of the school planning committee regarding how schools should look. Many questions that must be considered in the construction of new schools and building remodeling are addressed as well as issues and alternatives each district can take into account with its own resources, situation, and philosophy. The first section looks at a hypothetical school containing design elements that are described and discussed in section 2. Section level is planning, specification determination, and planning for quality. Design examples of nine schools, a master plan checklist, and a listing of resources in providing planning assistance are included. (EJS)

Program Planning and Assessment Developed specifically to support Ontario's new Chemistry 12 College Preparation course (SCH4C), this highly readable resource addresses the needs of a larger and more diverse student base by placing a stronger emphasis on STSE and practical applications instead of theoretical rigor.

Math 1 This classic ICMA "green book" is filled with practical guidance on a broad range of issues that planners are likely to encounter—whether they work in inner cities, older suburbs, rural districts, or small towns. In addition to covering the latest planning trends and the impact of technology, diversity, and citizen participation, this text gives complete coverage of basic planning functions such as housing, transportation, community development, and urban design.
